## **Taco Comfort Solutions Prepares for Electrification Trends with Packaged Air-to-Water Heat Pump System**

With more beneficial electrification policies taking effect across North America, Taco Comfort Solutions® has partnered with Glen Dimplex Thermal Solutions to develop a complete packaged air-to-water heat pump system. The system responds to the increasing HVAC electrification trends while providing superior comfort and efficiency.

The Taco/Dimplex air-to-water heat pump system is a complete, integrated heating, cooling, and domestic hot water solution. The radically-innovative system is solar PV and smart grid ready, designed specifically for a low carbon society and built with the knowledge that water is the most efficient and natural energy transfer medium on the planet.

The outdoor air-to-water heat pump features advanced inverter technology, a variable speed fan, class-leading efficiency, and quiet operation. The indoor unit contains an integrated buffer tank, sleek user interface with smartphone app control, and a high-efficiency dual-ECM pump module to transfer water between the indoor and outdoor units and domestic hot water tank. The sleek, modular design of both units provides turnkey functionality and ease of installation.

The Taco/Dimplex air-to-water heat pump system will be available in the latter half of 2020.
