## **Drive Start-Up Check List**

| 1. | Ref | ference Material   |
|----|-----|--|
|    | a.  | Drive Installation, Operation and Maintenance Manual.  |
|    | b.  | Customer Connection Diagram (specific for the order).  |
|    | C.  | Schematic Diagram (specific for the order).  |
| 2. | Pre | e-Installation Checks  |
|    | a.  | Compare the drive model number to what was ordered.  |
|    | b.  | Be sure the following are for the same voltage:  |
|    |     | i) Drive.  |
|    |     | ii) Power line.  |
|    |     | iii) Motor.  |
|    | C.  | Record the following motor data:   |
|    |     | i) Voltage.  |
|    |     | ii) Frequency.   |
|    |     | iii) Full load current.  |
|    |     | iv) Full load speed.   |
|    |     | v) Power (convert HP to Kw – approximately 746 watts/HP).  |
|    | d.  | Be sure that rated drive current is greater than or equal to the   |
|    |     | total full load current of all motors which will be driven at once.  |
|    | e.  | Check motor wiring:  |
|    |     | <ul> <li>i) A disconnect or contactor between the drive and the motor may need to<br/>be interlocked to the drive or else nuisance trips may occur.</li> </ul> |
|    |     | ii) Multiple motors have individual motor overload and short circuit protection.   |
|    |     | iii) No power factor correction capacitors between the drive and the motor.  |
|    |     | iv) Two speed motors must be wired permanently for full speed.   |
|    |     | v) Y-start, $\Delta$ -run motors must be wired permanently for run.  |
|    |     | vi) Part winding start motors must be wired permanently for run.   |
| 3. | Ins | stallation Checks  |
|    | a.  | Verify appropriate short circuit protection is provided at the input of the drive.<br>Specific fuse requirement necessary for UL (See instruction manual).     |
|    | b.  | Measure phase to phase line voltage and ensure measured voltage is within drive specification (See instruction manual).  |
|    | C.  | Measure phase to ground voltage. If any measured phase voltage   |
|    |     | is greater than 60% of phase to phase voltage, open RFI switch.  |
|    | d.  | Environmental concerns.  |
|    |     | i) Suitable for drive enclosure type, Chassis, NEMA/UL Type 1, 12, 3R or 4.  |
|    |     | ii) Max 95% relative humidity, non-condensing.   |
|    |     | iii) 14°F to 113°F ambient temperature range (typical).  |
|    |     | iv) 3300 foot maximum elevation with no de-rating.   |
|    |     | v) Non-corrosive environment or unit conformal coated.   |
|    | e.  | Mounting   |
|    |     | i) No heat sink fins exposed out the back.   |
|    |     | ii) Drive mounting clearances observed (See instruction manual).   |
|    |     | iii) No excessive vibration.   |
|    |     | iv) Keep dirt and debris out of the drive.   |
|    |     | v) Use knock-outs provided or conduit entry plates for wire entry.   |

## **Drive Start-Up Check List**

(CONTINUED)

|    | f.                                      | Connections and Wiring   |
|----|---|--|
|    | 1.                                      | i) Check all wiring connections are secure.  |
|    |   | ii) Each drive grounded individually, no daisy chain grounds.  |
|    |   |  |
|    |   | iii) 0-10Vdc and ma signal wires protected from noise.   |
|    |   | iv) Separated runs for input power, motor power, and control wiring.   |
|    |   | v) Note some control connections may be 115VAC.  |
|    |   | vi) Motor thermistor wires separate from load wires.   |
| 4. |   | wering Drive   |
|    | a.                                      | Double check all wire connections (correct terminal connection, correct tightness).  |
|    | b.                                      | All RUN commands off, all speed commands set to zero.  |
|    | С.                                      | Switch Power on.   |
|    |   | Display and PWR LED on.  |
| 5. |   | sic Drive Set-up, Use Quick Menu — This step is essential!   |
|    | a.                                      | Parameter 0-01, LANGUAGE   |
|    | b.                                      | Parameter 1-20, MOTOR POWER (Kw)   |
|    | C.                                      | Parameter 1-22, MOTOR VOLTAGE (V)  |
|    | d.                                      | Parameter 1-23, MOTOR FREQUENCY (Hz)   |
|    | e.                                      | Parameter 1-24, MOTOR CURRENT (A)  |
|    | f.                                      | Parameter 1-25, MOTOR NOMINAL SPEED (RPM)  |
|    | g.                                      | Parameter 3-41, RAMP 1 RAMP UP TIME (S)  |
|    | h.                                      | Parameter 3-42, RAMP 1 RAMP DOWN TIME (S)  |
|    | i.                                      | Parameter 4-11, MOTOR SPEED LOW LIMIT (RPM)  |
|    | j.                                      | Parameter 4-13, MOTOR SPEED HIGH LIMIT (RPM)   |
|    | k.                                      | Parameter 1-29, AUTOMATIC MOTOR ADAPTATION   |
| 6. |   | Application Related Parameters, Use Quick Menu Function Set-ups  |
|    | a.                                      | Parameter Q3-4, Application Set-ups  |
|    |   | i) Parameter Q3-40, Fan Functions  |
|    |   | ii) Parameter Q3-41, Pump Functions  |
|    |   |  |
