Taco Announces Flow-Through Expansion Tank

Taco Comfort Solutions® announces a new flow-through expansion tank designed to help reduce the environmental conditions necessary for Legionella and other bacteria to flourish. With standard tank volumes ranging from 23 to 528 gallons, the flow-through expansion tank provides precise flow channeling through a patent pending head design.

Constructed, tested, and certified to ASME Section VIII Div. 1, these tanks minimize pressure loss, discourage short-cycling, and are retrofittable to meet ASHRAE Standard 188 on existing designs. Standard working pressure is 125 PSI with options for 150 PSI and higher. They are NSF/ANSI 61-G certified and are available with a sight glass for failure detection. Taco's flow-through expansion tanks will be available in the 2nd Quarter of 2022.
